DEPARTMENT OF NURSING
ECTS INFORMATION FORM

Course code: HEM 102	Course name: FUNDAMENTALS OF NURSING
Year/term	1st Year / Spring Semester
Program	Nursing
Language of Instruction	Turkish
Category	Compulsory
Degree Programs	Bachelor's degree
Prerequisites	There is no prerequisite for this course
Length of Course	14 weeks/8 h theoretical and 16 h practice
Instructor	Assoc. Prof. Dr. Hilal TÜZER Assoc. Prof. Dr. Ebru EREK KAZAN Assoc. Prof. Dr. Nigar ÜNLÜSOY DİNÇER Assist. Prof. Dr. Emine Tuğba TOPÇU
Course Objectives	The purpose of this course the student the basic philosophy of nursing and the role of the nurse in the health care system and help students to grasp its role as a nurse in nursing care and students the basic theories, concepts, principles and methods to gain the knowledge and skills. In this course the principles of nursing students of the subject-specific knowledge, skills and attitudes expected to win.
Course Contents	Historical Development of Nursing in the world and Turkey, Nursing Profession, Nurse Role and Functions of Nurses, Presentation of Health Services in Turkey, Health Team, Basic Human Needs, Life Process, Patient Safety, Sexuality, Self-Concept, Care-Concept, Homeostasis-Stress, Health-Disease Concepts, Sleep and Rest, Infection Control, Motion Requirements, Hygiene, Vital Signs, Pain, Medications I-II, Oxygenation, Liquid Requirement I-II, Nutrition, Shock and Nursing Care, Urinary Elimination and Faecal Elimination, Skin Integrity and Wound Care I-II, Perioperative Care, Loss, Grieving and Death, Health Assesment, Nursing Process
Learning Outcomes	The student; -nursing proffesion in society, their relations with other proffesions, duties, powers and responsibilities to learn, -basic human needs and the direction of healthy / patient care to individuals in making the necessary consepts, principles and methods, definitions, consepts and principles, -understand the importance of nursing care, this information to gain basic skills in using the nursing care, nursing care, while critical thinking, problem solving and to gain the ability to planned maintenance, -healthy / sick individuals to gain the ability to make health education, -nursing care in making effective use of resources and other disciplines in that of coopertion.

Course Outline Weekly

Week	Subject
1.	Historical Development of Nursing in the World and Turkey, Nursing Profession, Roles and Functions of Nurses, Presentation of Health Services in Turkey, Health Team, Basic Human Needs, Life Process,
2.	Patient Safety, Sexuality, Self-Concept, Care-Concept, Homeostasis-Stress, Health-Disease Concepts
3.	Sleep and Rest, Infection Control
4.	Movement Requirements
5.	Hygiene
6.	Vital Signs, Pain
7.	Medications I-II
8.	Oxygenation
9.	Liquid Requirement I-II
10.	Nutrition, Shock and Nursing Care
11.	Urinary Elimination and Faecal Elimination
12.	Skin Integrity and Wound Care I-II
13.	Perioperative Care, Loss, Grieving and Death
14.	Health Assesment, Nursing Process

Course code: HEM 104	Course name: SELF-RECOGNATION AND COMMUNICATION METHODS
Year/term	1st Year / Spring Semester
Program	Nursing
Language of Instruction	Turkish
Category	Compulsory
Degree Programs	Bachelor's degree
Prerequisites	There is no prerequisite for this course
Length of Course	14 weeks/ 2 h theoretical and 1h practice
Instructor	Prof. Dr. Birgül ÖZKAN Res. Asst. Şeyma Zübeyde ALBAKIR
Course Objectives	It is to enable them to self knowledge, to know and understand people, and to use their communication skills effectively in general and special situations.
Course Contents	This course covers communication and interpersonal communication, person perception, verbal messages, non-verbal messages, listening, interpersonal communication and ethical principles, relationship/interaction process, interaction contexts, changing relationships, communication with family and friends, communication in close relationships, barriers in communication, conflict. and reconciliation, cultural differences and communication.
Learning Outcomes	<ol style="list-style-type: none"> 1. Knowing communication and communication features 2. Getting to know yourself and people 3. To be able to establish the relationship between perception and communication 4. Knowing and using verbal and nonverbal communication features effectively 5. Knowing the defender communication features 6. Knowing and using active and passive listening features 7. Recognizing friction and conflict and knowing how to resolve them 8. Defining empathy and gaining and using empathic approach skills 9. Defining assertiveness and gaining assertiveness skills 10. Knowing the differences between professional and social relationships 11. Trying to develop behavior in line with professional identity 12. Using communication techniques effectively 13. Gaining the ability to establish a relationship for the benefit of the patient/helpful 14. Recognizing individual and environmental conditions that hinder communication and being able to solve these obstacles with problem solving skills. 15. Recognizing patient behaviors that create difficulties in the relationship 16. To be able to use effective communication techniques in the face of patient behaviors that create difficulties in the relationship 17. Recognizing the importance of meeting emotional needs for the patient 18. Ability to use effective communication skills to meet the emotional needs of the patient 19. Knowing and using communication techniques with the child 20. Knowing and using communication techniques with the terminal patient 21. Knowing and using communication techniques with individuals with severe mental health problems 22. Knowing and using communication techniques with the trauma survivor 23. Knowing and using communication techniques with unconscious individuals 24. Knowing and using communication techniques with the patient who cannot communicate verbally 25. Knowing and using communication techniques with individuals with hearing problems 26. Knowing and using group communication techniques
Course Outline Weekly	
Week	Subject
1.	Course introduction
2.	Basic concepts of communication; Definition of communication and general characteristics of the communication process
3.	Verbal-Nonverbal Communication

4.	Communication Levels (Basic assumptions of communication) Professional and Social Communication
5.	Self recognition and communication skills
6.	Self-awareness and ways to self-awareness Self Concept Defense Mechanisms
7.	Friction and conflict Listening and Features
8.	Perception and Communication relationship Defender Communication
9.	Assertiveness and Assertiveness Skill
10.	Empathy and Empathic Approach Skill
11.	Patient Behaviors that Create Difficulty in Relationships (Crying, requesting, complaining, sexual behaviors, refusing treatment)
12.	Effective and Ineffective Communication Techniques (Individual and Environmental Conditions that Prevent Communication)
13.	Communication in some special cases • Communication with the terminal patient • Communication with an individual whose mental health is severely impaired • Communication with the child
14.	Communication in some special cases Communication with an unconscious individual • Communication with the patient who cannot communicate verbally • Communication with the individual with a hearing problem

Instructor	Assist. Prof. Güler Cansu Ağören
Course Objectives	It is aimed that students will acquire knowledge about the key issues discussed in the field of the sociology of health, develop an awareness of the social dimensions of health and illness, and build an analytical capacity to apply sociological concepts and theories when interpreting health- and illness-related phenomena.
Course Contents	The course content includes key concepts of sociology of health such as the sick role, the distinction between illness, disease, and sickness, medicalization, and social control; the relationship between health/illness and social factors such as identity, class, gender, and ableism; and sociological issues relevant to healthcare professionals, including models of patient interaction, patient rights, and social support.
Learning Outcomes	By the end of this course, the student will be able to: <ul style="list-style-type: none">• Recognize that health and illness have social dimensions.• Identify key concepts used in the field of the sociology of health.• Develop an awareness of social issues that influence access to healthcare or vulnerability to illness.• Recognize the social rights that emerge within the field of health.

Course Outline Weekly

Week	Subject
1.	Introduction to the Course
2.	What is Sociology of Health?
3.	Key Concepts in Sociology of Health
4.	Medicalisation and Social Control
5.	Patient Rights
6.	Health and Gender
7.	Health and Ableism
8.	Midterm
9.	Discussion on Midterm Questions
10.	Bank Holiday
11.	Health and Stratification
12.	Health, Illness and Identity
13.	Interactions Between Patients and Health Care Professionals
14.	Banks Holiday
15.	Social Networks and Health Care

Year/term	3rd Year/ Spring Semester
Program	Nursing
Language of Instruction	Turkish
Category	Compulsary
Degree Programs	Bachelor's degree
Prerequisites	There is no prerequisite for this course
Length of Course	14 weeks/6 h theoretical and 16 h practice
Instructor	Prof. Dr. Sibel KÜÇÜK (S) Assist. Prof. Dr. Evrim KIZILER Assist. Prof. Dr. Dilek ULUDAŞDEMİR
Course Objectives	The aim of this course is to provide students with; To gain knowledge and skills about child health and diseases, basic principles of pediatric nursing and necessary nursing care in pediatric patients.
Course Contents	This Course; Basic Concepts in Child Health and Diseases Nursing, Child Health Problems in Turkey, Pediatric Nursing, Nursing Approaches to High-Risk Children and Their Families, Growth and Development Characteristics for Age, Vaccinations and Screenings, Hospitalized Child and His Family, System Diseases in Childhood and Nursing Care includes topics.
Learning Outcomes	At the end of this course, students; 1. To be able to identify the problems related to child health in the world and in Turkey and comprehend the role of the nurse in its solution. 2. Knows and applies the concepts of family-centered care, atraumatic care, primary nursing by considering the healthy/sick child with his family and environment. 3. Recognizes the physical and psychological characteristics and changes that may be a symptom of disease in all systems in the child, makes the necessary nursing diagnosis, plans, implements and evaluates the interventions. 4. While watching the growth-development process from birth to the end of adolescence, he/she recognizes and evaluates the factors that can affect this process positively/negatively by considering this process within the scope of development theories. 5. Helps and supports the child and family by using therapeutic communication techniques during periods of stress (such as hospitalization, chronic diseases, terminal period, fatal diseases) of the child and his/her family. 6. In line with ethical principles, they can decide, implement and evaluate the appropriate nursing intervention for the health problems of the child and his family. 7. Be able to follow scientific and technological developments in the field of child health and diseases, comprehend the importance of doing research and incorporating evidence-based practices into nursing care.

Course Outline Weekly

Week	Subject
1.	Child Health Problems/Solution Suggestions Health Assessment Growth and Development Pain Management in Children
2.	Hospitalized Children Children with Chronic and Life-Threatening Diseases
3.	Child Health (Pediatric) Nursing Ethics in Child Health and Disease Nursing

4.	Childhood Cancers Fluid Electrolyte and Acid Base Balance and Imbalances in Children
5.	Children with Infectious Diseases Children with Neurological Problems
6.	Healthy Newborns and Evidence-Based Care Practices in Newborns Risky Newborns
7.	Newborns With Physical Defects (Neural tube defects, Congenital hydrocephalus, Gastrointestinal system defects, Urogenital system defects, Musculoskeletal system defects)
8.	Neonates with Physical Defects (Congenital Heart Diseases, Pulmonary Heart Flow Reducing Defects, Constriction Defects, Mixed Defects, Pulmonary Blood Flow Reducing Defects)
9.	Children with Respiratory System Problems Child with Urinary System Problems Child with Genetic and Metabolic Problems
10.	Nutrition and Nutrition Problems in Children Frequent Accidents and Poisonings in Childhood
11.	Childhood mental problems Skin diseases and problems in children
12.	Child with Hematological Problems Child Abuse and Neglect
13.	Child with Endocrine Problems
14.	Methods of Drug Administration in Children

Course code: HEM 308	Course Name: Intensive Care Nursing
Year/term	3rd Year/ Spring Semester
Program	Nursing Program
Language of Instruction	Turkish
Category	Optional
Degree Programs	Bachelor's Degree
Prerequisites	There is no prerequisite for this course.
Length of Course	14 weeks/ 2 hours theoretical
Instructors	Assist. Prof. Dr Erdal CEYLAN Dr. Research Assistant Esra TAYAZ
Course Objectives	The course's goal is to equip students with the knowledge, abilities, and competence necessary to admit, diagnose, care for, treat, monitor, and assess patients in critical condition. It also aims to teach students how to make critical decisions about patients, ethical issues, communication, interdisciplinary teamwork, and psychological support, as well as how to apply this knowledge and competence in practice.
Course Contents	This course contains up-to-date information covering the basic concepts and issues of intensive care nursing.
Learning Outcomes	At the end of this course, students will be able to; 1. Describe the fundamental concepts and principles of the critical care unit. 2. List the characteristics, responsibilities and duties of intensive care nurses, 3. Evaluate intensive care patients comprehensively, 4. Understand the risk factors that can affect intensive care patients. 5. Recognize the indications for intensive care. 6. Know the complications that may be seen in intensive care patients, 7. Plan the care of intensive care patients, 8. Know the equipment used in intensive care, 9. Know the treatments used in intensive care patients, 10. Think critically and make decisions when caring for intensive care patients. 11. Define the ethical principles specific to intensive care, 12. Provide psychosocial support to patients and their families.

Course Outline Weekly

Week	Subject
1.	Definition of intensive care, patients in need of intensive care and intensive care principles
2.	The characteristics, responsibilities and duties of intensive care nurses
3.	Assessment and diagnosis in intensive care
4.	Monitoring methods used in intensive care patients: ECG/CPR/Defibrillation Applications
5.	Physiological issues commonly seen in intensive care units and nursing care.
6.	Care of the unconscious patient
7.	Mechanical ventilation and care of the patient who is monitored on mechanical ventilator (intubated, with tracheostomy)
8.	Common infections in intensive care, their control and prevention
9.	Multiple organ failure in intensive care
10.	Nutrition in intensive care patients, the role and responsibilities of the nurse in nutrition
11.	Communication between patients, their relatives and the team in intensive care
12.	Nurses' approaches to the psychological problems of intensive care patients and their relatives.
13.	Patient rights and ethical issues in intensive care
14.	Evidence-based nursing practices in intensive care and literature review

Course code: HEM 318	Course name: PERINATOLOGY
Year/term	3rd Year/ Spring Semester
Program	Nursing
Language of Instruction	Turkish
Category	Elective
Degree Programs	Bachelor's Degree
Prerequisites	There is no prerequisite for this course
Length of Course	14 weeks/2 h theoretical
Instructor	Prof. Dr. Sena KAPLAN Prof. Dr. Sevil ŞAHİN
Course Objectives	The aim of this course; To teach the necessary care and follow-up for a healthy pregnancy and a healthy birth resulting in a healthy mother and baby from the preconceptional period.
Course Contents	Preconceptional care, evaluation of fetal health, protection and improvement of health during pregnancy, risky pregnancies.
Learning Outcomes	At the end of this course, students; <ol style="list-style-type: none"> 1. Should be able to explain the importance of the preconceptional period 2. Should be able to explain the procedures in pregnancy follow-up 3. Should be able to list prenatal diagnostic tests 4. Should be able to explain the importance of prenatal diagnostic tests and genetic counseling 5. Should be able to explain practices for improving health during pregnancy 6. Should be able to list perinatal patient safety practices 7. Should be able to identify risky pregnancies 8. Should be able to explain the importance of perinatal services in disasters and extraordinary situations 9. Should be able to understand the importance of holistic evaluation in pregnancy losses

Course Outline Weekly

Week	Subject
1.	Opening, Meeting, Purpose and Expectations, Preconceptional Care
2.	Preconceptional Care
3.	Prenatal Diagnostic Tests
4.	Prenatal Diagnostic Tests
5.	Stress in pregnancy and its management
6.	Perinatal Services in Disasters and Extraordinary Situations (Migration, Pandemic, War, etc.)
7.	Perinatal Patient Safety
8.	Pregnancy Follow-up
9.	Nutrition, Weight Gain and Exercise during Pregnancy
10.	Early Pregnancy Complications and Nursing Approach
11.	Early Pregnancy Complications and Nursing Approach
12.	Late Pregnancy Complications and Nursing Approach
13.	Late Pregnancy Complications and Nursing Approach
14.	Prenatal Grief/Prenatal Loss, Psychosocial Aspects of Risky Pregnancies
